

N. BATTERY PACK EIGHT COMPARTMENT

BUILDING INSTRUCTIONS

Due to Giant Jets, Inc. inability to control the Method, technique and materials you use to build Your model, YOU will assume full liability for any Injury or damage caused by this model. REMEMBER: This is not a toy but rather a sophisticated high-Teach flying machine and should be handle with care and esterase attraction to safety.

GENERAL:

Due to the compound curved on the F-16 Fuselage, we strongly recommend the purchases Of a good quality plastic model 1/48 scale or larger to serve as a 3 dimensional reference.

A light-weight model will fly batter! Always remember to: "Build to fly, not to crash". The Prototype two-seater was built to 17 lbs ready to fly. Attention to materials selection should yield a model weighing 16-18 lbs.

A & B.
ILICATIONS.
